

science & engineering visualization challenge

in the picture

A good reason for AEIMS members to send in their best scientific illustration for the 2008 science & engineering challenge:

In 2007 there was no winner in the illustration categorie!

second place Illustration 2006

A DaVinci Blackboard Lesson in Multi-Conceptual Anatomy
Credit: Caryn Babaian, Bucks County Community College, Newton, Pa.

Some things never grow old. Biology teacher Caryn Babaian of Bucks County Community College in Newtown, Pa., used the iconic Leonardo da Vinci Vitruvian Man to illustrate rotation, transparency and transverse section in her anatomy class. Babaian requires her students to draw the image in their notebooks as they watch it take shape on the blackboard.

Call for AEIMS members "in the picture". In every newsletter there will be space for recent work of an AEIMS member. Send me your scientific illustration in jpeg format. In writing:
your name and website
work title
platform and date of publication
and a short commentary,
for example the briefing you got from the client, the choice of technique or a special detail of your choice of illustration.

Send this to info@maartjekunen.nl

and I will put it in the next newsletter.
